

DRONE INSPECTION

TOMTEC NDT MARINE SERVICES PTE LTD

Drone Inspection is helping the industries to improve efficiency and quality of data acquisition while increasing safety and speed of delivery. The advancement in sensors, radio-controlled devices and the miniaturization of computer processors has driven the use of drones in several industry sectors.

Traditional inspection methods such as erecting scaffolding, rafting or rope access are time consuming, labour intensive, expensive and high risk. With the implementation of drone, high risk activities will be minimised, time and labour needed for preparation and inspection will be greatly reduced, which translates to cost savings.

- ✓ Lesser manpower
Manpower involves are much lesser than tradition methods.
- ✓ Cost effective
Reduce needs for extensive scaffolding, cranes, rafting or rope access.

Applications

- ✓ Visual inspection of areas under deck areas, side shell and hard-to-access areas.

Key Benefits

- ✓ Safe
Reduce high risk activities by minimizing human access to dangerous locations.
- ✓ Rapid Deployment
Shorter preparation time and able to conduct inspection at a much faster pace.
