

RAFTING

**TOMTEC NDT MARINE
SERVICES PTE LTD**

In scenarios where there is a need to survey the under-deck condition of a vessel, Rafting method is sometimes being chosen as one of the methods for remote survey inspection. Especially during the vessel's voyage, where staging is not a possible solution.

In Tomtec, our operators are experienced with use of inflatable rafts to perform rafting surveys in cargo tanks and ballast tanks. Performing Rafting inspection is a hazardous operation, but our operators are well trained to be able to identify the potential hazards and manage the emergencies if arises.

This rafting method effectively offers the Owner an alternative option as to erecting staging, cradles or any aerial work platform, which can conduct during the voyage of the vessel.

Our Rafting services include:

- ✓ Ultrasonic Thickness Measurement
- ✓ Condition assessment
- ✓ Visual Inspection by CCTV
- ✓ NDT Inspection
